Weather Journal

One day in the sky · fill in what you observe

Date

Time

Place

Temperature

Wind (speed & direction)

Air pressure (if you have it)

Sky today (clear, partly cloudy, overcast, fog…)

Clouds I can name (cumulus, stratus, cirrus, nimbus…)
Look at the cloud chart. It is all right to be unsure — write what you see.

Precipitation (none, rain, snow, sleet, hail — and about how much)

What else I noticed (animals, smells after rain, a halo, a rainbow…)

Scout's question · What do I think the sky will do tomorrow, and why?

A month of pages like this will teach you the weather of your own backyard.
